SUBSTITUTES FOR GOOD CUTS

Office of the **Photo-Plate Company,**

63 DUANE STREET,

I. OESTERREICHER, Manager.

NEW YORK, JANUARY 1, 1878.

With pleasure we invite your attention to our new and improved Photo Engraving Process, by means of which we can furnish relief plates in hard type metal directly from Dew or Crayon drawings, Prints from Wood or Steel Engravings, Lithographs &c of any size (reduced or enlarged)

We make a speciality of cuts for Newspaper Book, or Catalogue Illustrations, Maps, and Fac-similes of autographs. Having recently increased our facilities, we are prepared to execute orders at greatly reduced rates.

We could refer to leading Publishing Houses as to the superiority of our plates, but prefer rather to allow our work to be our sole recommendation. Soliciting your patronage. We are Yours Truly
The Photo Plate Company

To insure attention, Merchants and Manufacturers cannot find a better way of advertising than by autograph circulars, which being an exact fac-simile of their own hand-writing, will be carefully read, while type circulars having become so common that they are consigned to the waste basket unread.

Price of this class of work varies from 20c. to 40c. per square inch.

GENERAL INFORMATION IN REGARD TO OUR PLATES.

The Relief Plates, produced by our process offer all the advantages of wood-cuts, and are preferable to them in many respects, as they are more durable, never warp, and the printing surface remains true and smooth in all temperatures; they can be printed with type on an ordinary press, electrotyped or stereotyped in the usual way. Concerning depth and precision of lines, variety and exactness of designs, they compare favorably with the best artistic work of engravers.

In the accurate reproduction of the original, promptness and moderate cost of preparation, they simply exclude all competition.

Steel Engravings and intricate designs, the execution of which would engage the time and labor of artists for months, are reproduced in any size required in a few hours, just as easily as the simplest drawings.

Copy.—This process being pre-eminently a copying process, it is obvious that the excellency of the reproduction will depend in a great measure on the quality of the original, although minor defects can be remedied in the plate.

Of engravings, to be copied perfectly, black prints on white paper must be furnished.

Drawings of any description should be made on smooth, white paper, and even the finest lines must be thoroughly sharp and black.

Pictures colored, or printed on deeply tinted paper, lose in the photographic reproduction.

Lithographs and crayon drawings give surprisingly good relief plates, but it requires careful printing to do them justice.

Photographs from nature are not reproduced direct, but are used by our artist for the rendering of pen-drawings.

To preserve the accuracy of the photograph the lines are drawn on an enlarged copy, simply replacing the photo-tints by line shading, thus retaining the truthfulness of the photograph.

Reduction and Enlargement.—The facility to enlarge or reduce furnished copies, is one of the many advantages of our process and can be carried to extreme limits, but it is not always advisable to do so, as the lines become proportionately coarse and ragged in too great an enlargement, and so fine and close together in too great a reduction, that they are apt to fill in printing. Pen drawings and wood-cuts can be reduced to advantage, in proportion to the boldness of the lines, say one-half, or one-fourth of the original size. Fine crayon drawings, lithographs and steel engravings, may be slightly enlarged, with good results.

Time.—We are able to fill even large orders within a day or two, but being generally crowded with work for several days ahead, we advise our customers to send their orders as early as possible.

Terms.—Regarding plates to be furnished by contract and remittances for work rendered, we follow the usages of the trade.

Electrotypes.—Although our plates will stand fifty thousand impressions, with ordinary

care, it is advisable to print from electrotypes, (which can be furnished at a very small cost), to insure valuable plates against accidents and wear.

Electrotyping, like every copying process, is subject to imperfections, which are often attributed to the plate by the inexperienced.

To provide our customers with good electrotypes, which we examine critically before delivery, we have connected an Electrotypes Foundry with our establishment, from which we furnish electrotypes at usual rates, and we take more than ordinary care in their production.

Printing.—It is hardly necessary to mention, that, though a bad plate can never print well, even the best engraving can be spoiled by poor printing. In all cases, the printed results should be as good as the proofs which accompany our plates.

We will, on application, furnish estimates for printing, and will personally supervise the same, thus procuring the best press-work possible.

Prices.—The cost of preparation varies with the size and quality of the subject, but it is in all cases below the price of wood-cuts, the difference becoming more striking, the more complicated and difficult the design.

The diversity and variety of illustrations, make it necessary for us to estimate on all work ordered, instead of having a price-list.

The figures under each cut in this circular, will enable our customers to form an approximate idea of prices.

In all transactions with us, our customers may rest assured that our aim will be to give perfect satisfaction.

Instruction to Draughtsmen.—Though we keep a well trained corps of artists constantly employed, the increased demand for this class of work makes it advisable for us to foster among draughtsmen the art of drawing, suited to the requirements of our process.

Artists must always bear in mind, that the whiter the paper, and the blacker the ink, the better the result.

Brown, gray, blueish or pale lines, will invariably appear coarse, broken and rotten, therefore the finest lines must be perfectly sharp and black. The gradation in shading should be produced by the varying boldness and distance of the lines.

Rough paper always produces uneven and ragged lines and should be avoided. We advise enlarged drawings in all cases, as in the reduction the imperfections decrease, and give a finer and better effect. One-half the width or height will give a good result.

Where there are a number of drawings, they should all be made on the same scale.

The artist, who desires to see his work popularized and rendered in faithful reproduction will be amply rewarded for the extra care and trouble bestowed on the drawing by the advantage derived through our process.

STREET AND AVENUE DIRECTORY

OF THE

CITY OF BROOKLYN.

COMPILED FROM THE OFFICIAL RECORDS

ADOPTED BY THE COMMON COUNCIL.

LAIN & CO., PUBLISHERS,

213 MONTAGUE STREET, BROOKLYN,

AND

113 Fulton Street, New York.

Showing the commencement and termination of each Street, Avenue, Place, Lane, Court, etc., in the City together with corner numbers of every intersecting Street or Avenue.

EXPLANATIONS.

If you desire to ascertain the location of any number—for instance, No. 250 Nevins street—you will observe that No. 240 Nevins is on the corner of Douglass, right side, and No. 256 Nevins is on the corner of Degraw, hence the desired location of No. 250 Nevins street is between Douglass and Degraw, on the right side.

Or, suppose you wish to take a car for the purpose of reaching as nearly as possible No. 569 Willoughby avenue. The Street Directory shows (see Willoughby avenue) that No. 511 Willoughby avenue is on the corner of Marcy avenue, and No. 581 is corner Tompkins avenue, both on the left side, so that to reach No. 559 Willoughby avenue, you will leave the car at either Tompkins avenue or Marcy avenue.

Even numbers will be found on the right side, odd numbers on the left.

A † placed in the right or left column denotes that the street or avenue does not extend to that side.

A — denotes that there is no number on the corner.
